

World Kidney Day @ Hong Kong 2015 - Sunday 8 March 2015

World Kidney Day @ Hong Kong 2015 - Sunday 8 March 2015 Attended by 800 renal patients and healthcare professionals

Guest of Honor: **Dr. Ko Wing-man, BBS, JP**Secretary for Food & Health,
Food & Health Bureau, HKSAR

Address by

Dr. Leong Che-hung, GBM, JP

President, Hong Kong Kidney Foundation

Prof. Richard Yu, SBS, Patron, HKKF

Dr. Leung Pak-yin, JP

Chief Executive, Hospital Authority

Dr TH LEUNG, JP

Controller, Centre for Health Protection

Prof. Philip Li

Council member, ISN

Welcome by

Dr. Lui Siu-fai, MH, JP

Chairman, Hong Kong Kidney Foundation

Dr. Choi Koon Shing

Chairman, Hong Kong Society of Nephrology

Dr. Cheung Wai-lun, JP

D(CS), Hospital Authority

Dr. Anne FungAssistant Director of Health (Health Promotion)

Everyone to drink a glass of water and give one too to celebrate their kidneys.

8 glasses of water a day for good kidney health (General advice for healthy people)

A survey on the knowledge of kidney disease was conducted at public housing estates and via on-line platform.

Response from 1739 participants.

Hong Kong citizens are not aware of kidney disease.

Need to enhance health promotion

Key findings:

- 50% not aware diabetes is the main cause of End stage Kidney failure
- 60% not aware hypertension can be a sign of kidney disease
- 75% not aware of 1000+ new cases of End stage kidney failure every year in Hong Kong

腎臟是人體重要器官,你懂得保護它們嗎?

腎臟的功能:

●排走廢物:毒素、尿素、代謝物

●平衡體內水份

●調節血壓

●製造紅血球增生素

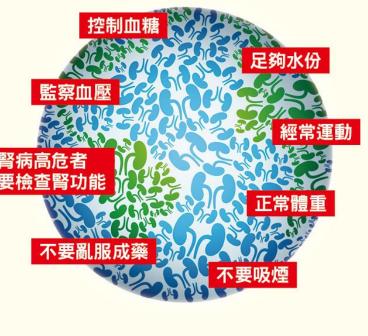

●調節酸鹼度

你的一對腎臟在 身體哪個位置, (1)或(2)?

工確答案:(2)

Message:

The 10th World Kidney Day is jointly organized by Hong Kong Society of Nephrology, Hong Kong Kidney Foundation, Hospital Authority and Department of Health, HKSAR. The them is **"Kidney Health for All, Everyone in Hong Kong to join in"**.

Kidney disease is common, affecting 10% of the world population. About 5% of the world population has impairment of kidney function. During 2014, there were 1300+ new patients with end stage kidney failure registered in Hong Kong. With accumulation, there are now 10,000+ patients with end stage kidney failure receiving renal replacement therapy from Hospital Authority. The cause of end stage kidney failure was diabetes (46%) and hypertension (8%). Hence patients with diabetes and hypertension are "high risk" for kidney disease.

This year, around the world, 8 golden rules to prevent kidney diseases is being promoted – control diabetes, control blood pressure, avoid "purchased over the counter" medicine, individual with high risk should have regular investigation for kidney disease, adequate water intake, regular exercise and control body weight. In general (for people in good health), one way to ensure good kidney health is to drink plenty of water, up to 8 glasses each day. It is also important to be aware of the symptoms of kidney disease and has regular body check,

We need to take action to prevent kidney diseases in Hong Kong. Early detection and appropriate treatment can prevent disease progression and complication.

Kidney threat not seen by a majority of people

Despite World Kidney Day about to mark a decade, more han half of 1,739 people who responded to a survey do not know the leading cause of kidney failure is diabetes.

The Hong Kong Kidney Foundation polled people in 2 housing estates in January and February, with 1,420 inswering questionnaires and 319 responding online. Just 44 percent knew that diabetes is the leading cause or the life-threatening condition.

Twenty-six percent believed it is nephritis or inflamnation of the kidneys, 19 percent pointed to high blood pressure and 5 percent believed an infection brought it on. Four percent said it depended on a family's medical istory and 3.4 percent do not know what to think.

Pointing to diabetes as the leading cause of end-stage idney failure, the foundation called on diabetes sufferers

The survey also showed that 39 percent of respondents were not aware that a poor appetite, nausea and vomiting could be symptoms of kidney disease.

市民普遍對腎病認識不足 (港閩)

015-03-08 (12:07)

the big day by showing how to stay in shape. ALEXANDER FUNG

In 2014, there were 1,169 new cases of end-stage kidney failure - also known as renal failure - in Hong Kong. And of 9,137 people known to be suffering with end-stage kidney failure, 2,027 are awaiting kidney transplants.

The Hospital Authority has over 7,000 people listed with end-stage kidney failure in Hong Kong on dialysis treatment or with a transplanted kidney. That is 90 percent more than 10 years ago.

World Kidney Day is marked around the world on the second Thursday of March. So it is this Thursday.

末期腎衰竭主因。醫

對腎病認識不足,總分100計算,平均僅 多泡(蛋白尿)或深

1)控制血糖、血壓 2) 腎病高危人士,要檢查 常運動,控制體重

情况嚴重可在一至三日內令聲 他指,較常見是長者囚難節炎或爲症。

「護腎八式」 監察血糖血壓

學會於今年一至二月訪問約一千七百人,結果發現近 六成受訪者不知糖尿病是引致末期腎衰竭的首位「元 兇」;少於一半人認識失血、脱水、尿道阻塞等可致急 性腎損傷。只有約一半受訪者知道小便帶泡沫、足踝 浮腫亦是腎病病徵。醫生提醒市民做足「護腎八式」。 包括監察血糖及血壓,不要亂服成藥等。

能損害腎功能。市民勿亂服成藥,若服藥後出現小便 帶泡·出疹等,應多加注意及求醫。

腎科醫生提倡八招預防腎病,包括控制血糖、監 察血壓、飲足夠水分、經常運動、保持健康體重、切 勿吸煙,不亂服成藥,以及糖尿病患者等腎病高危族
